

Certified Professional in Patient Safety (CPPS)

SAVE LIVES BY IMPROVING PATIENT SAFETY

13-14, April, 2017

What is the CPPS?

The granting of **CPPS** status recognizing health care professionals' achievement in the field of patient safety and risk management as well as health care quality managements by the National Patient Safety Foundation (**NPSF**) in the USA. The comprehensive body of knowledge includes patient safety, human factors engineering, and the practice of safe care. Certification requires a combination of education and experience, as well as successful completion of the evidence based certification exam.

Objectives

- Review in depth the five patient safety content areas as required for the CPPS exam content outline.
- Discuss patient safety scenarios.
- Share examples similar to actual exam questions.
- Assess the participants own level of preparedness for the exam.
- Investigate additional areas for self-study.

This will be covered

- Patient safety culture.
- Leaderships.
- Patient safety Risks & Solutions.
- Measuring & Improving Performance.
- System Thinking& Design / Human Factors.
